[Money is not enough]

softserve
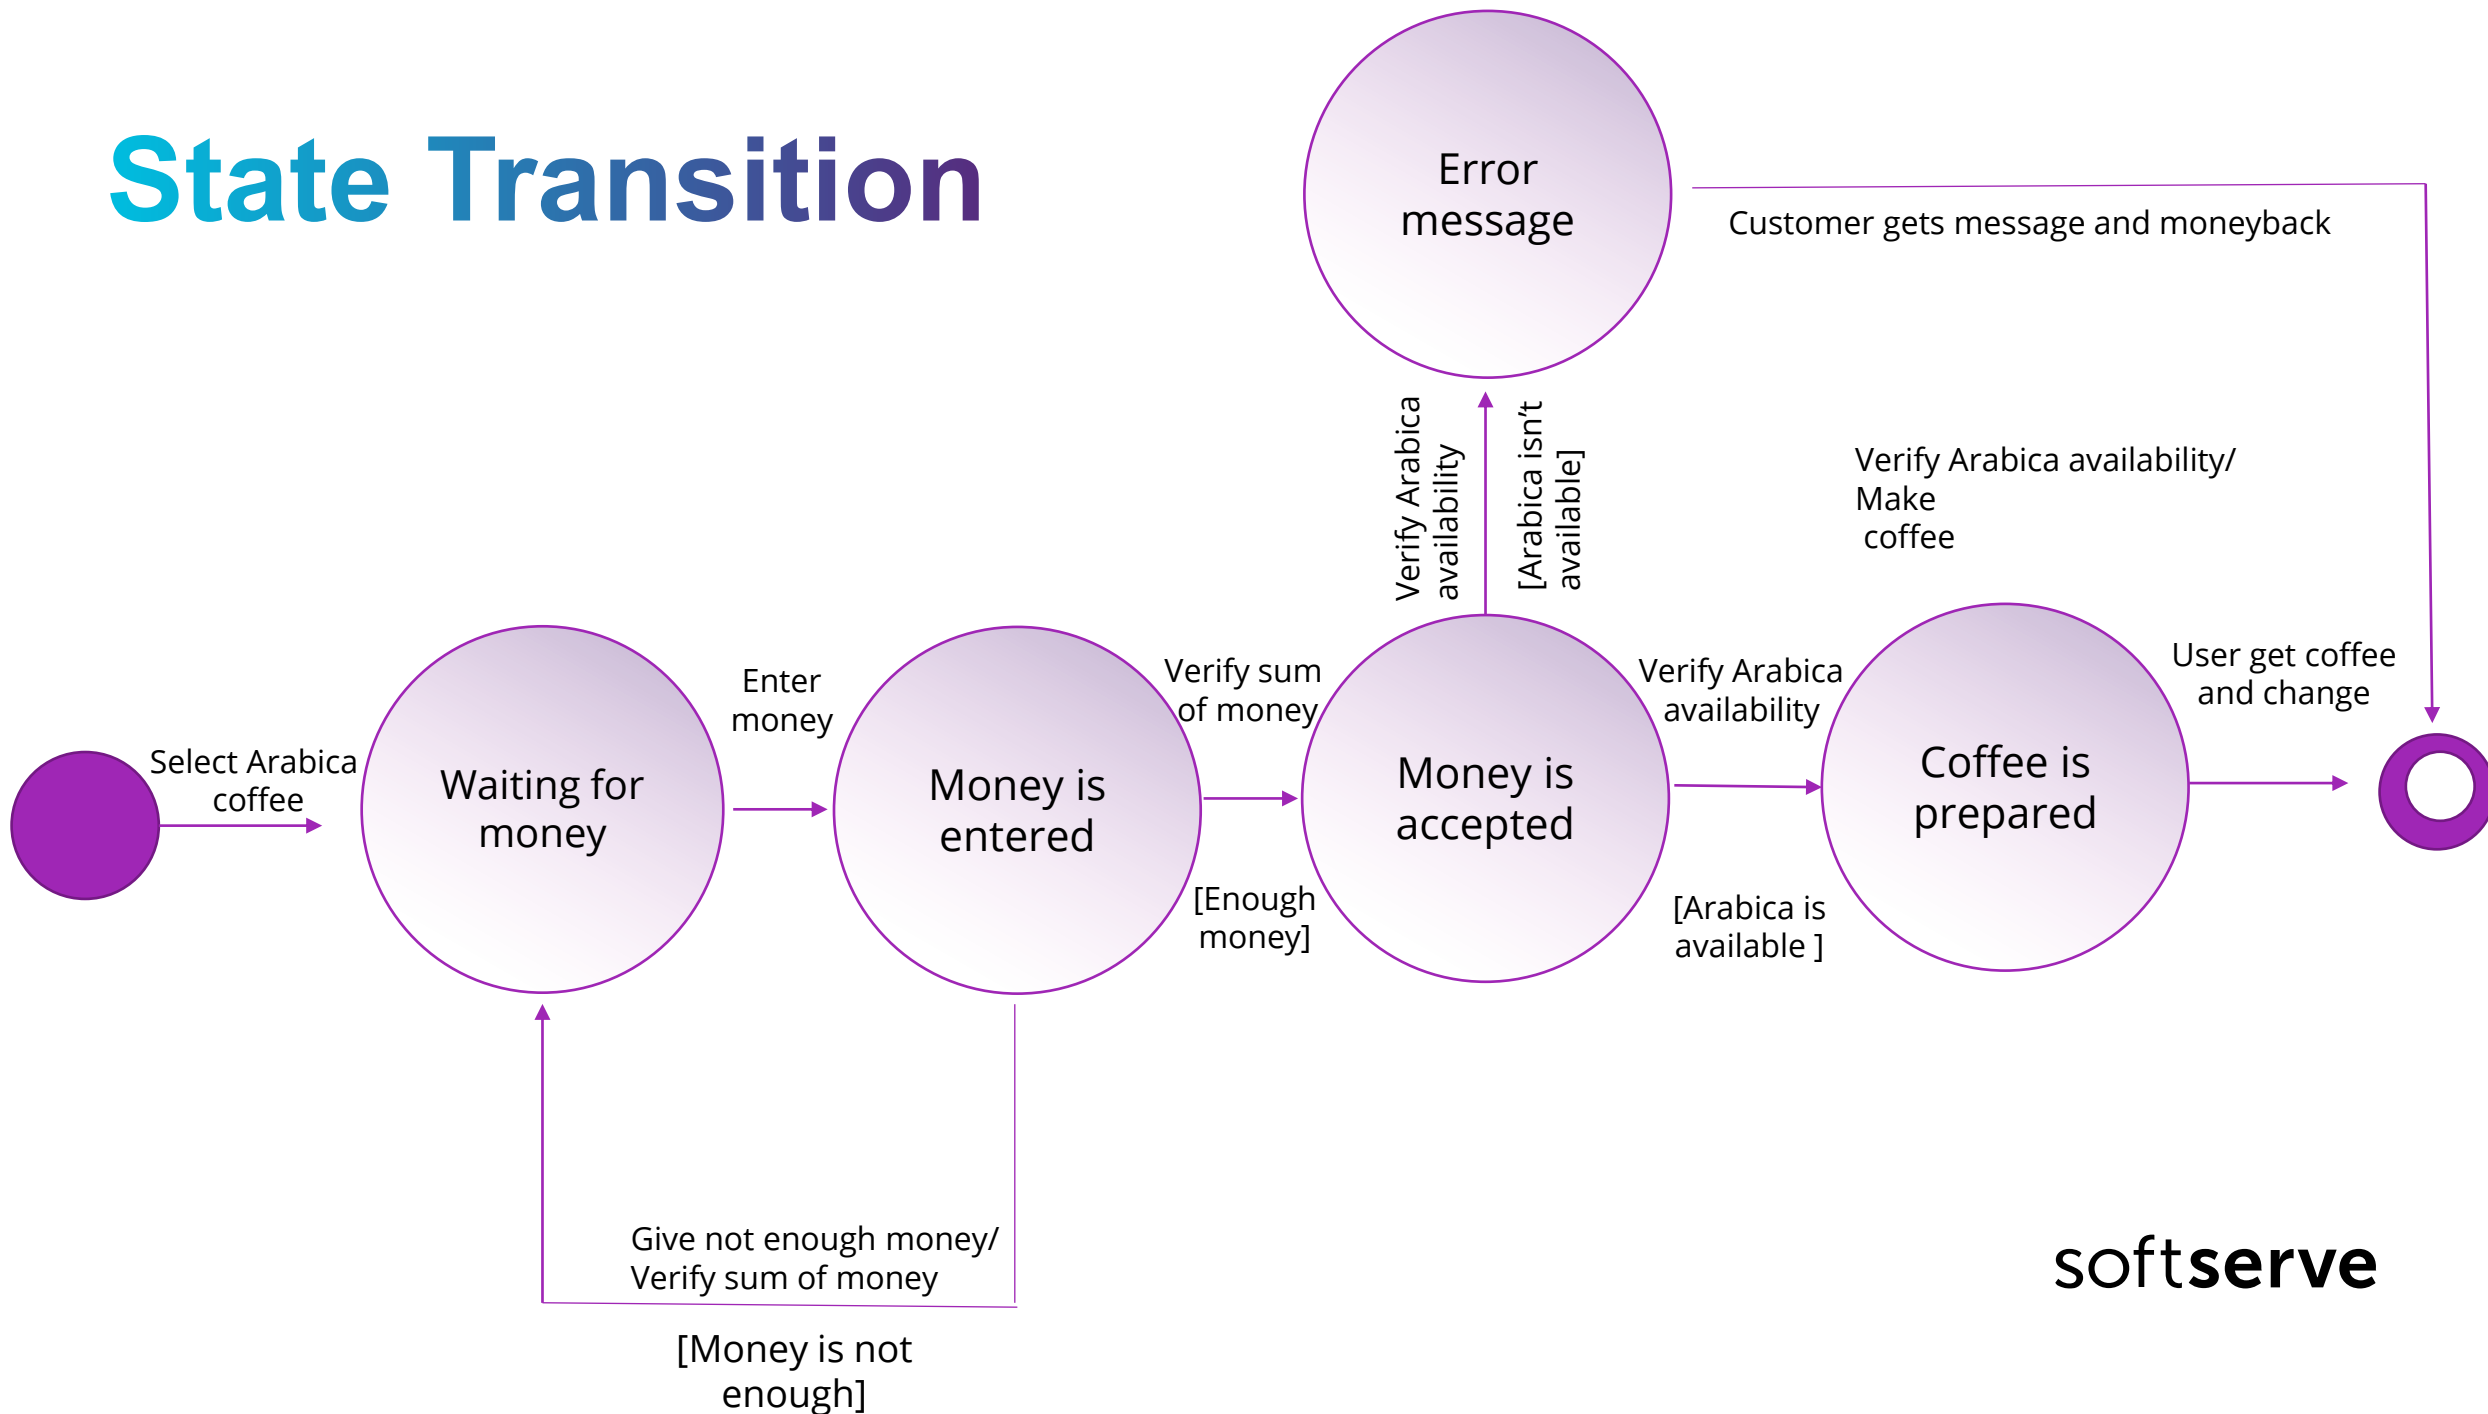

Customer chooses Arabica coffee from coffee machine. He selects specific sort of coffee (in this case Arabica), and enters money. If not enough money is entered, then machine will ask to enter more. If amount of money is ok, then machine will start doing coffee. If Arabica coffee is available, then customer will get coffee and his change in a minute. If there is no selected sort of coffee, then customer will get proper message and his money back.

#	
1	Verify that customer gets Arabic coffee if he enters enough money and Arabica is available
2	Verify that user get back money and message if he enter enough money and Arabica isn't available
3	Verify if Customer gets Coffee if he enters not enough money, then enters enough money and Arabica coffee sort is available
